Professional profile

Computer Engineering student at Wroclaw University of Science and Technology, focused on backend and business applications in .NET. I build production-style systems with C#, ASP.NET Core, EF Core and PostgreSQL, including authorization, transactions, automated tests, Docker and CI/CD. Seeking my first Junior C#/.NET Developer role.

Technologies

Backend .NET: C#, .NET 8/10, ASP.NET Core Web API, REST, EF Core, MediatR, DTOs, Swagger/OpenAPI, JWT, roles and authorization policies
Databases: PostgreSQL, SQL, relational modeling, migrations, transactions, indexes, integrity constraints, concurrency, ODBC
Testing and delivery: xUnit, FluentAssertions, Testcontainers, integration testing, Playwright E2E, Docker Compose, GitHub Actions, Git/GitHub
Frontend / desktop: React, TypeScript, JavaScript, HTML/CSS, Next.js, Avalonia UI, MVVM

Featured projects

Order Flow Management System

2026 | PERSONAL PROJECT

ASP.NET Core 8 | PostgreSQL 16 | EF Core 8 | MediatR | Testcontainers | Docker Compose

• Designed and implemented order, payment, inventory and warehouse workflows with JWT, roles, reports and a controlled status lifecycle.
• Applied layered architecture, transactional stock reservation, optimistic concurrency and an Outbox pattern processed by a separate Worker.
• Created 45 automated tests covering domain behavior, PostgreSQL integration with Testcontainers and frontend behavior; configured CI with GitHub Actions.

Helpdesk Management System

2026 | PERSONAL PROJECT

ASP.NET Core 10 | React + TypeScript | PostgreSQL | EF Core | SignalR | Playwright | Docker

• Built an internal helpdesk with Employee/Technician/Admin roles, ticket queues, SLA tracking, comments, attachments and change history.
• Implemented asset inventory with assignments, audit trail and CSV import/export; secured the API with JWT and role-based authorization.
• Added unit, integration and E2E tests, Docker Compose, GitHub Actions and documented demo setup.

Pharmacy Management System

2026 | UNIVERSITY TEAM PROJECT

C#/.NET 10 | Avalonia UI | MVVM | PostgreSQL | ODBC | SQL

• In the team project, I was mainly responsible for the PostgreSQL database and technical documentation, while also supporting integration and other application modules.
• Co-developed the data model, migrations, constraints, views, triggers, database roles, setup and backup scripts, and the ODBC repository layer.
• The project covers medicines, customers, prescriptions, sales, deliveries, inventory and reports in a cross-platform Avalonia application using MVVM.

Additional projects

Bilingual Portfolio Website Next.js | React | TypeScript | Vercel - PL/EN portfolio, project case studies, GitHub REST API, SEO and Vercel deployment.

TSP Algorithms Benchmark C++17/20 | TSPLIB | CSV - Comparison of exact algorithms, heuristics and metaheuristics with reproducible tests, CSV results and charts.

Vocabulary Learning App Python | Django | DRF | JavaScript - Team project; my main contribution covered responsive frontend/UI, Django templates and API integration.

Education

2022 - present | Wroclaw University of Science and Technology
B.Eng. in Computer Engineering - in progress; specialization: Information Systems in Medicine. Areas: programming, databases, algorithms, networks and testing.
2018 - 2022 | Electronic Schools Complex in Boleslawiec
IT Technician; computer systems, peripherals, networks, web development and databases. Vocational internship at St. Luke's Hospital in Boleslawiec.

Languages and additional competencies

Polish: native | English: B2 | technical documentation | Microsoft 365: Word, Excel, PowerPoint | computer hardware, operating systems and networking fundamentals | teamwork and independent troubleshooting

I consent to the processing of my personal data included in this CV for the purposes of the current recruitment process.
